<ul style="list-style-type: none"> • The Fund aims to achieve its investment objective by taking exposure to a wide range of asset classes, including equities, fixed income, commodities and property. The Fund shall not invest directly in commodities or property. • The Fund will utilize a global multi-sector strategy to combine the Investment Advisor's total return investment process with income maximization. Portfolio construction is based on the principle of diversification across various equity and global fixed income securities. • In making investment decisions the Investment Advisor considers various quantitative and qualitative data relating to global economies and projected growth of various industrial sectors and asset classes. Although the Fund has the capability to use the types of investment outlined in this policy, it is possible that certain instrument types are not used all of the time. While analysis is performed daily, material shifts in investment exposures typically take place over medium to longer periods of time. • Part or all of the exposure to equity and equity-related securities may be selected using the PIMCO Core Equity Strategy as described in the Supplement. • In relation to the global fixed income selection process, top-down and bottom-up strategies are used to identify multiple sources of value to generate consistent returns. • The Fund will typically invest 20% - 80% of its net assets in equity or equity-related securities, and which may include investments in other sub-funds of the Company or CIS that primarily invest in equity or equity-related securities. • The Fund may invest: (i) not more than 25% of its total assets in commodity-related instruments; (ii) up to 20% of its net assets in structured notes (e.g., equity-linked notes and credit-linked notes); (iii) up to 25% of net assets in securities listed/traded on the Moscow Exchange; and (iv) up to 20% of its assets in units or shares of other CIS. • The Fund may use derivative instruments (such as futures contracts, options contracts, options on futures contracts, swap agreements and options on swaps agreements) for: (i) hedging purposes; (ii) investment purposes, and/or (iii) efficient portfolio management. • The Fund is considered to be actively managed in reference to the Benchmark, which it uses for calculating global exposure (using relative VaR methodology) and performance comparison purposes, but not to define portfolio composition or as a performance target. • The NAV of the Fund could potentially experience high levels of volatility as a result of the asset classes that the Fund invests in.

KEY RISKS	
<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of Shares of the Fund can go down as well as up and an investor may not get back the amount invested. These risk factors may cause you to lose some or all of your investment:</p>	<p>Refer to "General Risk Factors" of the Irish Prospectus and "Risk Factors and Use of Derivatives" of the Singapore Prospectus for further information on risks of the product.</p>
Market and Credit Risks	
<ul style="list-style-type: none"> • The Fund is subject to credit risk as it could lose money if the issuer or guarantor of a Fixed Income Security in which it invests, or counterparty to a derivatives contract, is unable or unwilling to meet its financial obligations. • The Fund is subject to currency risk as changes in exchange rates between currencies or the conversion from one currency to another may cause the value of the Fund's investments to diminish or increase. 	

- **The Fund is subject to equity risk** as the value of equity securities, which are more volatile than Fixed Income Securities, may decline due to general market conditions.
- **The Fund is subject to interest rate risk** as the value of Fixed Income Securities held by the Fund is likely to decrease if nominal interest rates rise.

Liquidity Risks

- **The Fund is exposed to liquidity risk** where it invests in derivative instruments which are difficult to purchase or sell. It may not be possible to initiate a transaction or liquidate a position at an advantageous time or price if a derivative transaction is particularly large or if the relevant market is illiquid. The Fund is not listed in Singapore and you can redeem only on Dealing Days. There is no secondary market in Singapore for the Fund.

Product-Specific Risks

- **The Fund is subject to valuation risk due to the manner and timing of valuations of its investments in other CIS.**
- **The Fund's use of derivative instruments is subject to the derivatives risks described in the Irish Prospectus, such as commodity risk, liquidity risk, interest rate risk, market risk, credit risk and management risk.** Derivatives will typically be used as a substitute for taking a position in the underlying asset.
- **The Fund is subject to global investment risk** as securities of certain international jurisdictions may experience more rapid and extreme changes in value.
- **The Fund is subject to emerging markets risk** as it invests in securities of issuers based in developing economies which may present market, credit, currency, liquidity, legal, political and other risks different from, and potentially greater than, the risks of investing in developed foreign countries.
- **The Fund may be subject to Euro-related risks** as it may have investment exposure to Europe and the Eurozone, and in light of the sovereign debt crisis in Europe there is the possible risk of a destabilising effect on all Eurozone economies if a country exits from the Euro or if the Euro ceases to exist as a single currency.
- **Dividends may be payable out of the capital of the Fund or of certain share classes,** as a result capital will be eroded.
- **The Fund may be subject to risks from directly investing in Fixed Income Instruments traded on CIBM.** The Fund may be exposed to liquidity risks, settlement risks, default of counterparties and market volatility associated with CIBM.
- **The Fund's investment in commodity index-linked derivative investments may subject the Fund to greater volatility** than investments in traditional securities.
